

Key Constraints in Raptor Sampling

Maria Dulsat Masvidal
6th March 2019

1. STSM objectives

Review of key constraints

The aim of this STSM is to **identify and search for solutions to the main constraints** to obtain and **share raptor samples and related contextual data** about the individual and/or population from which samples are obtained.

2. Searching for constraints

IDENTIFICATION OF CONSTRAINTS

- ✓ Sampling framework
- ✓ List of contextual data
- ✓ Short-survey to experts
- ✓ Bibliographic review

LIST OF CONSTRAINTS

Legal Methodological Spatial coverage Skills

30

2. Searching for constraints

Distribution of the Questionnaire

Role in the framework
Importance of constraints
Possible solutions

125 persons (at least)

40 answers

13 countries

**WE NEED
YOUR HELP**

3. Assessing constraints: Preliminary results

The **top 5** constraints

1. Difficulty in **collecting complex contextual data** : Sources of contamination
2. Number of **monitoring schemes** to provide access to raptor samples and data
3. Number of **institutions** that participate in the monitoring scheme
4. Lack of **skills** to practice necropsies
5. Adequate **short-term storage** of the samples

4. Searching for solutions
